<u>COMED K – BIOLOGY – 2012</u>				
	VERSION CODE: D			
1.	Which one of the fo	llowing is a step in proce	essing of Kipps and Buffs	5?
	a) Deliming	b) Casting	c) Digesting	d) Reeling
Ans	(a)			
	The deliming is the	technique of processing	of leather.	
2.	Which one of the fo	llowing agents affects ha	atching of silk worm egg	s?
	a) Protozoan parasi	tes	b) Fungus	
	c) Mulberry leaf fer	mentation	d) Virus	
Ans	(a)			
	Nosema bombysis i	s the protozoan that cau	ises disease in silkworm	S.
3.	A terminator codon	which is called amber is		
	a) UGA	b) UAG	c) UAA	d) UUU
Ans	(b)			
	UGA is opal and UA	A is Ochre		
4.	In which of followin	g groups of plants, the l	ife cycle includes the ga	metophytic phase which is
	dominant, photosyr	hthetic, independent and	sexually reproducing?	
	a) Angiosperms	b) Gymnosperms	c) Bryophyta	d) Pteridophyta
Ans	(c)			
	In bryophytes, the is dominant phase i		and attached to gamete	ophyte. This gametophyte
5.	Which of the follo Plantarum" modern plant nome	authored by Carolus	-	e book entitled "Species is starting point date for
	a) 1 st May 1753	b) 1 st January 1935	c) 1 st January 1856	d) 1 st May 1856
Ans	(a)			
6.	Which one of the fo	llowing is NOT a pharma	nceutical product obtaine	ed through Biotechnology?
	a) Human insulin		b) Human growth hor	mone
	c) Clotting factor		d) Cholecystokinin	
Ans	(d)			
	It is the hormone secreted by the duodenum. It stimulates the secretion of bile from gal bladder. Insulin, growth hormone and clotting factors are the proteins obtained from recombinant DNA technology.			•
7.	Choose the most ap following.	opropriate combination o	of components of respira	atory membrane, from the
	a) Alveolar wall and	ducts		
	b) Inner and outer	pleural membranes and	pleural fluid	
	c) Membranes of al	veolar ducts and capillar	ies	
	d) Alveolar wall, alv	veolar capillary and inter	stitial space	
				4

Ans	(b)				
	The epithelium of alveolus is attached to the capillary wall to form alveolar capillary membrane.				
8.	Giriraja is a				
	a) Cross breed of c	lesi breed of poultry and	d white leghorn		
	b) Hybrid of aseel	and bursa breeds of pou	ultry		
	c) Desi breed				
	d) Cross breed of F	Nymouth Rock and desi	breed of poultry		
Ans	(a)				
	It is obtained by purpose variety.	crossing indigenous br	eed with exotic breed.	It is an example for dual	
9.	Which one of the fo	ollowing codes for an an	nino acid?		
	a) Cistron	b) Exon	c) Codon	d) Intron	
Ans	(a)				
	It is the segment o	f DNA that codes for an	amino acid.		
10.	Plasmids were disc	overed by			
	a) Hayes and Lede	rberg	b) Lederberg and Tatum		
	c) Boliver and Rod	riguez	d) Messing and Vieria	3	
Ans	(a)				
	Lederberg and Tate	um discovered genetic r	ecombination in bacteria		
11.	Which of the following is NOT a component of non specific defense?				
	a) Mucous membrane		b) Phagocytosis	b) Phagocytosis	
	c) Lysozyme		d) Killer T cells		
Ans	(d)				
	They are the specif	ic T lymphocytes.			
12.	From which part of	the human heart does	the largest artery arise?		
	a) Left ventricle	b) Right ventricle	c) Left atrium	d) Right atrium	
Ans	(a)				
	Aorta originates fro	om right ventricle.			
13.	In the electron tran from	nsport chain the first AT	P molecule is generated	when the hydrogen passes	
	a) FMN to NAD	b) FMN to COQ	c) NAD to FMN	d) NAD to COQ	
Ans	(c)				
	This is the first con	nplex of the inner meml	orane of mitochondria		
14.	Which one of the following is NOT a correct statement with reference to placenta?				
	a) It prevents the movement of maternal IgG antibody from the mother of the foetus				
	b) It acts as a foetal lung				
	c) It acts as a foetal liver by storing glycogen				
	d) It acts as an end	docrine gland			
Ans	(a)				
	IgG can be easily t	ransported across the p	lacenta.		

 a) Diffusion b) Imbibition c) Anaerobic respiration d) Osmosis Ans (b) During imbibition, the pressure develops. It is the strongest of all the pressure. 16. A tactile organ in cockroach is a) Antennae b) Ommatidia c) Fanestrae d) Anal cerci Ans (a) They are sensitive to touch. b) Ommatidia are the facets of compound eyes. Fenestrae are the simple eyes. Anal cerci orginate from 9th segment of abdomen. 17. Continuity of cytoplasm from cell to cell is maintained through a) Pit canals present in primary walls b) Plasmodesmata c) Plasmalemma d) Middle lamella Ans (b) 18. Carl Correns a rediscoverer of Mendel's work was from a) Austria b) Germany c) Holland d) Denmark Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coll</i> are used as host cells. 20. Cranial nervos are part of a) sympathetic nervous system b) Cansult nervous system c) somatic nervous system d) central nervous system c) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular osmotic pressure d) Glomerular osmoti	15.	A professor wanted to demonstrate a physiological process. He filled a glass bottle with previously moistened gram seeds. He screw capped the bottle and kept it away in a corner, and resumed the lecture. After about 45 minutes there was a sudden explosion with shattering of the glass bottle into pieces of glass. Which of the following phenomenon did the professor wanted to demonstrate?			
 c) Anaerobic respiration d) Osmosis Ans (b) During imbibition, the pressure develops. It is the strongest of all the pressure. 16. A tactile organ in cockroach is		•		b) Imbibition	
Ans (b) During imbibition, the pressure develops. It is the strongest of all the pressure. 16. A tactile organ in cockroach is			ation		
During imbibilion, the pressure develops. It is the strongest of all the pressure. 16. A tactile organ in cockroach is	Ans	-			
 16. A tactile organ in cockroach is	7.115		he pressure develops. It	is the strongest of all th	enressure
 a) Antennae b) Ommatidia c) Fanestrae d) Anal cerci Ans (a) They are sensitive to touch. b) Ommatidia are the facets of compound eyes. Fenestrae are the simple eyes. Anal cerci originate from 9th segment of abdomen. 17. Continuity of cytoplasm from cell to cell is maintained through	16	-		is the strongest of an th	
Ans (a) They are sensitive to touch. b) Ommatidia are the facets of compound eyes. Fenestrae are the simple eyes. Anal cercl originate from 9 th segment of abdomen. 17. Continuity of cytoplasm from cell to cell is maintained through	10.	-		c) Fanostrao	d) Anal cerci
They are sensitive to touch. b) Ommatidia are the facets of compound eyes. Fenestrae are the simple eyes. Anal cerci originate from 9 th segment of abdomen. 17. Continuity of cytoplasm from cell to cell is maintained through a) Pit canals present in primary walls b) Plasmodesmata c) Plasmalemma d) Middle lamella Ans (b) 18. Carl Correns a rediscoverer of Mendel's work was from a) Austria b) Germany c) Holland d) Denmark Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are	Anc	-	b) Ommatidia	c) i anesti ae	
the simple eyes. Anal cerci originate from 9 th segment of abdomen. 17. Continuity of cytoplasm from cell to cell is maintained through a) Pit canals present in primary walls b) Plasmodesmata c) Plasmalemma d) Middle lamella Ans (b) 18. Carl Correns a rediscoverer of Mendel's work was from a) Austria b) Germany c) Holland d) Denmark Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are	AIIS		ta tauah h) Ommatidia	are the feaste of some	aund avec. Forestres are
 a) Pit canals present in primary walls b) Plasmodesmata c) Plasmalemma d) Middle lamella Ans (b) 18. Carl Correns a rediscoverer of Mendel's work was from a) Austria b) Germany c) Holland d) Denmark Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are					bund eyes. Fenestrae are
 c) Plasmalemma d) Middle lamella Ans (b) 18. Carl Correns a rediscoverer of Mendel's work was from a) Austria b) Germany c) Holland d) Denmark Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system Ans (b) The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular osmotic pressure d) Glomerular osmotic pressure and glomerular osmotic pressure d) Glomerular osmotic pressure and glomerular bydrostatic pressure e) Glomerular osmotic pressure = net hydrostatic pressure – net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 	17.	Continuity of cytopl	asm from cell to cell is n	naintained through	
Ans (b) 18. Carl Correns a rediscoverer of Mendel's work was from a) Austria b) Germany c) Holland d) Denmark Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular osmotic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtratio		a) Pit canals presen	t in primary walls	b) Plasmodesmata	
 18. Carl Correns a rediscoverer of Mendel's work was from a) Austria b) Germany c) Holland d) Denmark Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular osmotic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure and glomerular hydrostatic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure Ans (a) The effective filtration pressure= net hydrostatic pressure –net osmotic pressure a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 		c) Plasmalemma		d) Middle lamella	
a) Austriab) Germanyc) Hollandd) DenmarkAms(b)19.Humulin is produced by genetic engineering ving one of the following organisms a) Bacillus coagulensb) Escherichia coli10.Aspergillus speciesd) Agrobacterium tumefaciensAms(b)Contail nerves are part ofd) Agrobacterium tumefaciens20.Cranial nerves are part ofa) sympathetic nervous systemb) Parasympathetic nervous systemc) somatic nervous systemd) central nervous systemc) somatic nervous systemd) central nervous systema) Glomerular hydrostatic pressure and glomer-ular osmotic pressurea) Glomerular hydrostatic pressure and glomer-ular osmotic pressureb) Capsular hydrostatic pressure and glomer-ular osmotic pressurec) Glomerular osmotic pressure and glomer-ular osmotic pressured) Glomerular osmotic pressure and glomer-ular osmotic pressurea) Glomerular osmotic pressure and glomer-ular osmotic pressurea) Glomerular osmotic pressure and glomer-ular osmotic pressurea) Glomerular osmotic pressure and atterial pressure – net osmotic pressureb) Capsular hydrostatic pressure and atterial pressure – net osmotic pressurea) Glomerular osmotic pressure and atterial pressure – net osmotic pressurea) K+, Na+, Cl-b) K+, Na+, Cl-c) K+, Na+, Cl-b) K+, Na+, Cl-b) K+, Na+, Cl-c) K+, Na+, Cl-b) K+, Na+, Cl-b) K+, Na+, Cl	Ans	(b)			
 Ans (b) 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system c) somatic nervous system d) central nervous system 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular nervous the pressure d) Glomerular osmotic pressure and glomerular osmotic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and glomerular bydrostatic pressure d) Glomerular osmotic pressure and glomerular osmotic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and glomerular osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- 	18.	Carl Correns a redis	coverer of Mendel's wor	k was from	
 19. Humulin is produced by genetic engineering using one of the following organisms a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and arterial pressure d) Glomerular osmotic pressure and arterial pressure d) Glomerular osmotic pressure = net hydrostatic pressure –net osmotic pressure e) Sacording to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 		a) Austria	b) Germany	c) Holland	d) Denmark
 a) Bacillus coagulens b) Escherichia coli c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system d) central nervous system d) central nervous system d) central nervous system filtration of blood are	Ans	(b)			
 c) Aspergillus species d) Agrobacterium tumefaciens Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure d) Glomerular osmotic pressure and arterial pressure –net osmotic pressure a) Glomerular osmotic pressure = net hydrostatic pressure –net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 	19.	Humulin is produced	d by genetic engineering	using one of the followi	ng organisms
 Ans (b) The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of		a) Bacillus coagulen	IS	b) Escherichia coli	
 The <i>E. coli</i> are used as host cells. 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure= net hydrostatic pressure –net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 		c) Aspergillus specie	es	d) Agrobacterium tumefaciens	
 20. Cranial nerves are part of a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure = net hydrostatic pressure –net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 	Ans	(b)			
 a) sympathetic nervous system b) Parasympathetic nervous system c) somatic nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are		The E. coli are used	as host cells.		
 c) somatic nervous system d) central nervous system Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure= net hydrostatic pressure –net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- 	20.	Cranial nerves are p	part of		
 Ans (b) 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure = net hydrostatic pressure -net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 		a) sympathetic nerv	ous system	b) Parasympathetic nervous system	
 21. The pressure which favours filtration of blood in the kidney and the one which opposes the filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure= net hydrostatic pressure –net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 		c) somatic nervous	system	d) central nervous system	
 filtration of blood are and respectively a) Glomerular hydrostatic pressure and glomerular osmotic pressure b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure = net hydrostatic pressure –net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 	Ans	(b)			
 b) Capsular hydrostatic pressure and glomerular osmotic pressure c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure= net hydrostatic pressure –net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 	21.	The pressure which favours filtration of blood in the kidney and the one which opposes the			e one which opposes the
 c) Glomerular osmotic pressure and glomerular hydrostatic pressure d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure = net hydrostatic pressure -net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 		a) Glomerular hydro	ostatic pressure and glor	merular osmotic pressure	<u>)</u>
 d) Glomerular osmotic pressure and arterial pressure Ans (a) The effective filtration pressure = net hydrostatic pressure -net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- 		b) Capsular hydrost	atic pressure and glome	rular osmotic pressure	
 Ans (a) The effective filtration pressure = net hydrostatic pressure -net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- Ans (c) 		c) Glomerular osmo	tic pressure and glomer	ular hydrostatic pressure	
 The effective filtration pressure = net hydrostatic pressure -net osmotic pressure 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, CI- b) K+, Na+, H+ c) K+, H+, CI- d) K+, Na+, H+, CI- Ans (c) 		d) Glomerular osmo	otic pressure and arterial	pressure	
 22. According to active K+ transport hypothesis, besides the organic acids, the turgidity of guard cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- Ans (c) 	Ans	(a)			
cells is controlled by which one of the following combinations of ions? a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- Ans (c)		The effective filtration	on pressure= net hydros	static pressure –net osmo	otic pressure
a) K+, Na+, Cl- b) K+, Na+, H+ c) K+, H+, Cl- d) K+, Na+, H+, Cl- Ans (c)	22.	0		5	0,00
Ans (c)		-		-	
	Ans	-			

23.	Which one of the fol	lowing is NOT a cause of	male infertility?	
	a) Oligospermia	b) Asthenozoospermia	c) Teratazoospermia	d) Motile sperms
Ans	(d)			
	Low sperm count an	d defective sperms are t	he causes for the infertil	ity
24.	The first stable com	pound formed in Kerb's o	cycle is	
	a) Acetyl Co A	b) Citric acid	c) Oxaloacetic acid	d) Fumaric acid
Ans	(b)			
	This citric acid is fo compound.	rmed from the combina	tion of two carbon comp	bound and a four carbon
25.	A prehensile tail as i	in chameleon is an adapt	ation for	
	a) swimming	b) grasping	c) sliding	d) climbing
Ans	(b)			
	It longer in this anir			
26.	bronchitis,	asthama and cough?		ed in the treatement of
	-	nb) Adathoda vasica	c) Gymnema sylvestre	d) Phyllanthus emblica
Ans				
	Gymnema is used as			
27.		ng combination of physic		
	-	and CO ₂ is oxidized	b) Both CO_2 and water	-
0	c) CO_2 is reduced ar	nd water is oxidized	d) Both CO ₂ and water	get reduced
Ans		stalucia in thulakaid		
28.	CO_2 fixation and pho		and mother with type "	AB' blood could have the
20.	blood type			
	a) 'O' type	b) 'AB' type	c) 'O' or 'AB' type	d) 'A' or 'B' type
Ans				
20	There is no i and i o			
29.	as	nich shortens the veget	ative period and nastens	s the flowering is known
	a) Etiolation	b) Vernalization	c) Photoperiodism	d) Parthenocarpy
Ans	(b)			
	Parthenocarpy is the	e development of fruit wi	thout fertilization.	
30.	The two, more dista	ntly related phyla are		
	a) Cnidarians and Pl	atyhelminthes	b) Annelida and Arthrop	ooda
	c) Chordata and Eac	hinodermata	d) Mollusca and echino	dermata
Ans	(c)			
	These two share ma	ny common feature duri	ng embryonic developme	ent.
31.	-	sfer of genetic material teriophage is called		n to the other bacterium
	a) translation	b) transduction	c) transformation	d) conjugation

Ans (b)

It is vector mederated genetic transfer

Discovered by Leaderberg and Zinder

Translation – Protein synthesis

Transformation – Discovered by Griffith. Here living bacterial cells take the genetic material from Dead bacterial cell

Conjugation: Discovered by Leaderberg and Tatum.

Transfer of genetic material from one bacterial cell to another bacterial cell through conjugation bridge.

32. Which one of the following is NOT a function of Sertoli cells?

a) Acting as nurse cell to the sperms

b) Secreting the hormone inhibin

- c) Forming a manchette
- d) Secreting testicular fluid for transporting sperms to the lumen of the seminiferous tubule

Ans (d)

Semen is contribution of Prostate gland seminal vesicle and Bulbourethral gland secretion.

- 33. In the Lac-operon of *Escherichia.coli* there are three adjacent structural genes viz. lac Z, lac Y, and lac A. Lac A gene codes for
 - a) Beta glactosidase

- b) Beta galactoside transacetylase
- c) Beta galactoside permease
- d) Polymerase

Ans (b)

Lac – Z codes for β - galactosidase

Lac – Y codes for Lacose permease

34. Which one of the following features represents a recessive character in Mendel's pea plants?

a) Round seed b) Green pod colour c) Red flower d) Yellow pod colour

Ans (d)

Round seeds red flower and green colour pods are dominant trait.

- 35. Where would you look for active cell division in a plant?
 - a) In the pith cells

b) At the tips of roots and stems

c) In cells of cortex

d) In the internodal region

Ans (b)

These region have apical meristems

- 36. Which one of the following is a correct combination of two biodiversity hot spots in India?
 - a) Eastern Himalayas and Eastern ghats
- b) Eastern Himalayas and Western ghats
- c) Western ghats and Eastern ghats d) West coast and Western ghats

Ans (b)

- 37. Which one of the following reactions is catalyzed by the enzyme reverse transcriptase?
 - a) Transfer of information from RNA to RNA
 - b) Transfer of information from DNA to RNA
 - c) Transfer of information from Protein to DNA
 - d) Transfer of information from RNA to DNA

Ans (d)

Reverse transcriptase = RNA dependent DNA polymerase and is found in retroviruses

~~				
38.		ing processes helps in n		-
_	a) Glycogenesis	b) Glycogenolysis	c) Lipogenesis	d) Glycolysis
Ans				
20	0.0	ogen to glucose under th		0 0
39.		ng endosmosis? Choose		Ũ
	-	diffuse from lower wate		•
		s diffuse from higher wa	•	ater potential
	-	move from a solution t	·	
A m o		s move from cell towards	S Its exterior	
Ans		al colution) has higher M	and coll can of coll ba	s lower W
40		al solution) has higher ५ ing is a structural polysa		Slower r_{ω}
40.	a) Glycogen	b) Chitin	c) Keratin	d) Pectin
Ans		b) chillin		d) rectin
		lysaccharide and reserv	e food	
	5 6 1	omopolysaccharide in th		
	Keratin: Scleroprote			
41.	•		NOT necessary for obta	aining protoplasts for their
	somatic hybridizatio		, in the second s	3 1 1 1 1 1 1 1 1 1
	a) Cellulase		b) Primase	
	c) Pectinase		d) Both cellulose and	pectinase
Ans	(b)			
	These are transm membrane	nembrane proteins rec	quired to transport s	pecific compounds across
42.	Which one of the fo	ollowing breeds of cow is	s a milch breed?	
	a) Amrit mahal	b) Hallikar	c) Sindhi	d) Surti
Ans				
	(a) and (b) – Droug	-		
		ch goat breed and Buffa		
43.		ing animals does not ha		
	a) Snake	b) Lizard	c) Field rat	d) Domestic Cat
Ans				
44.	wherein the vessels	s and companion cells a	re absent in the xylem a	
	a) Angiosperms	b) Thallophytes	c) Bryophytes	d) Gymnsperms
Ans				
	Bryophyte : Avascu	•		
	Angiosperm : Vascu		с. н.	
		cular plants. Eg: Algas,		
	in gymnosperm tra	cheid and albuminous c	ells are found	

45. Which one of the following families has features like bisexual, pentamerous, gamopetalous corolla with epipetalous stamens, sagittate anthers, subapocarpous ovary and a pair of follicles as their diagnostic characters?

a) Malvaceae b) Leguminosae

c) Musaceae

d) Apocynaceae

Ans (d)

Malvaceae: Bisexual pentamerous, polypetalous but basally united, monodelphous, monothecus anther, pentacarpellary ovary, and capsule

Musaceae: Bisexual, Trimerous tapels and fruit are in 2 whorls of three each, bithecus anther, stamens are arranged (3 + 2) condition, tricarpellary ovary and berry fruit.

Read the following passage and answer Question No. 46 to 48 Double fertilization is an exclusive feature found in flowering plants.

- 46. Based on the course of the growth of pollen tube and entry into the ovule which one of the following is known as misogamy?
 - a) Entry of pollen tube through the micropyle into the ovule
 - b) Entry of pollen tube through the plancenta and the funiculus
 - c) Entry of pollen tube through the integuments

d) Entry of pollen tube through the funiculus and chalaza into the embryo sac from the egg apparatus end

Ans (c)

- Ex: Cucurbita
- (a): Porogamy Ex.: Lily
- (d): Chalazogamy Ex.: Betula
- 47. Which one of the following events lead to double fertilization
 - a) Fusion of two polar nuclei
 - b) Fusion of a male gamete with the egg and the other with antipodal cells
 - c) Fusion of a male gamete with the egg and the other with secondary nucleus
 - d) Fusion of a male gamete with two polar nuclei and the other with nucellar cells

Ans (c)

- 48. Mature embryosac in majority of Angiosperms is
 - a) 8 celled and 8 nucleate b) 7 celled and 8 nucleate
 - c) 5 celled and 7 nucleate d) 3 celled and 4 nucleate

Ans (b)

- 3-cell Antipodal cells
- 3-cell Egg apparatus (one egg + 2 synergids)
- 1-secondary nuclei with two nucleus

	Read the following passage and answer Question NO. 49 to 51			
	Sclerenchyma is a simple permanent tissue with thick secondary lignific	ed cell walls.		
49.	 In which of the following cells the secondary cell walls are present? a) The cells containing cytoplasm only b) The cells with protoplast c) The cells which are living at maturity d) The cells which are non living a 	t maturity		
Ans	ns (d)			
FO	Secondary cell wall formation in plant cell leads to cell senescence			
50.	Macrosclereids b) Bracnysclereids c) Osteosclereids d) Astrosc	clereids		
Ans	Ans (b) Macrosclereid : Seed coat of Pea, leaves of xerophyte Osteosclereid: Seed coat of monocot seed Astrosclereid: Petiol of Nymphaea			
51.				
Ans	ns (c)			
	Endocarp of coconut has sclereid			
	Mesocarp of coconut and mango has fibres			
	Read the following passage and answer Question No. 52 to 54			
	The mechanism of fertilization involves different events like approximation acrosomal reaction activation of egg and amphimixis. According to F.R. Lillie a occurs due to interacting complementary substances called fertilizin and anti fer	approximation		
52.	. Fertilizin is			
	a) a glycoprotein b) an acidic protein c) a carbohydrate d) a lipid			
Ans	ns (a)			
	- Fertilizin (gynogamone) – constituent of egg envelope - Anti fertilizing (Androgamone) – acidic protein constituent of plasma membr head	rane of sperm		
53.	. The fertilization membrane is formed in order to			
	a) Fecilitate the entry of sperm into the egg			
	b) Provide stability to the egg			
	c) Prevent monospermy			
_	d) Prevent polyspermy			
Ans	ns (d)			
	Fertilization membrane is formed from vitelline membrane after fertilization			

54.	During amphimixis many events occ events.	cur. Choose the INCORRECT event from the following		
	a) Swelling of the sperm nucleus			
	b) Initial movement of the male pron	ucleus along the copulationpath		
	c) Establishment of achromatic spindl	le by the proximal centriole		
	d) Completion of second meiotic division if it has not occurred already			
Ans	(b)			
	Initial movement of male pronucleus	in the cortex of egg is called penetration path		
	Read the following passage and answer Question No. 55 to 57			
	5	ave the following clinical features: Slanting eyes with d, hypertelorism, dysplastic ears, mangoloid face and		
55.	The above mentioned features are as	sociated with which syndrome?		
	a) Down's syndrome	b) Klinefelter's syndrome		
	c) Turner's syndrome	d) Cri-du chat syndrome		
Ans	(a)			
	(45A + XX or 45A + XY) = 47			
56.	The chromosomal condition of the ab	ove syndrome is		
	a) Autosomal aneuploidy	b) Allosomal hyperaneuploidy		
	c) Allosomal hypoaneuploidy	d) Autosomal partial deletion		
Ans	(a)			
	- Trisomy of 21 st chromosome (45 A)			
	- Due to non disjunction of 21 st chro formation)	pmosome during gamete formation (usually during egg		
57.	Which one of the following is the corr	ect chromosomal compliment of the above syndrome?		
	a) 47 chromosomes due to extra chro	omosome 21		
	b) 47 chromosomes with 44A plus XX	Y		
	c) 45 chromosomes with 44A plus XC			
	d) Partial deletion of short arm of 5^{th}	chromosome		
Ans	(a)			
	(b) – Klinefelter's syndrome			
	(c) – Turner's syndrome			
	(d) – Cri-due chat syndrome			

Read the following passage and answer Question No. 58 to 60

According to theory put forth to explain the mechanism of organic evolution, when structure of a gene under goes a change, the trait it represents also changes. This results in a heritable variation in population, and may lead to the formation of new species from pre existing species.

58. The above theory is known as a) theory of origin of species by natural selection b) mutation theory c) theory of inheritance of acquired characters d) theory of biogenesis Ans (b) Proposed by Hugo de Vries while studying plant *oenothera lamanckiana* (evening prim rose) (1901)59. Change in gene structure is termed c) genetic drift a) mutation b) variation d) Gene knock out Ans (a) Genetic drift: Random change in the gene frequency in a population purely a matter of chance. Variation: Changes in the morphological, physiological characters in the offsprings from their parents. Genetic knock out: Genetic technique in which an organism is engineered to carry genes that been made inoperative. 60. Who put forth the above theory of evolution? a) Darwin b) De Vries c) Lamarck d) Wallace Ans (b) Darwin - theory of origin of species by natural selection Lamarck – theory of inheritance of acquired characters

Alfred Russel Wallace – Independently proposing theory of evolution due to natural selection.
