

Attachment:

This diagram displays the percent of population that has high cholesterol versus the number of active farmers markets for 35 states in the United States. The size of the bubble gives a visual representation of the population of each state. The smallest bubble represents a population of approximately 600,000, while the largest represents a population of approximately 13 million.

Fill each blank using the drop-down menu to create the most accurate statement on the basis of the information provided.

1. For the state with the median number of farmers markets, approximately _____ percent of the population has high cholesterol.

- A. 25
- B. 27.5
- C. 30
- D. 33

2. If the state with the highest incidence of high cholesterol has a population of

approximately 3 million, the number of people with high cholesterol in that state is approximately _____ of the number of people with high cholesterol in the state with the greatest number of farmers markets.

- A. 15%
- B. 28%
- C. 36%
- D. 83%

The percent of the population aged 25 Years and over that did NOT have a bachelor's, graduate, or professional degree is _____

- A. 7%
- B. 16%
- C. 27%
- D. 59%

E. 73%
