

TOEFL Academic discussion task

1. Professor Anderson:

In our recent class on environmental economics, we discussed two approaches to address water scarcity: water pricing and water conservation regulations. I would like to hear your opinion on which approach you believe is more effective in managing water resources. In your response, express your preference and provide supporting reasons. Your contribution should be at least 100 words long.

2. Professor Lee:

As we delve into the topic of urban planning, I want to explore two strategies for managing urban growth: urban sprawl and compact city development. Which strategy do you think is more beneficial for creating sustainable cities, and why? In your response, express your viewpoint and provide arguments to support your choice. Your response should consist of a minimum of 100 words.

3. Professor Ramirez:

We have discussed the advantages and disadvantages of two methods for generating electricity: fossil fuels and renewable energy sources. Now, I would like to hear your perspective on which energy source should be prioritized for future power generation. In your response, state your preference and provide reasons to justify your stance. Your contribution should be at least 100 words in length.

4. Professor Roberts:

In our recent class on international relations, we examined two foreign policy approaches: realism and idealism. I would like to know which approach you believe is more effective in promoting global peace and cooperation. Express your opinion in response to this question and support it with relevant arguments. Your response should contain a minimum of 100 words.
