

ICAR AIEEA PG 2026 Plant Biotechnology

- Overall paper difficulty ranged from moderate to difficult
- Biochemistry made up the bulk with 30-35 questions — content-wise easy, but the options were confusingly framed
- Biotechnology + Tissue Culture accounted for 20-25 questions and stayed on the easier side
- Physiology carried 30 questions, and candidates found these quite confusing
- Molecular Biology had a smaller share, around 5-8 questions
- General Agriculture + Current Affairs made up 20-25 questions and proved to be the toughest section
- Assertion-Reason type questions were relatively fewer this time
- On the whole, the core concepts weren't hard, but the way options were worded made picking the right answer genuinely tricky
