Even when the government realises the importance of a plentiful supply of trees, it is difficult for it to persuade the villager to see this. He wants wood to cook his food with; and he can earn money by making charcoal or selling wood to the townsman. He is usually too lazy or too careless to plant and look after new trees. So, unless the government has a good system of control, or can educate the people, the forests slowly disappear.

Question Numbers : (141 to 145)

Directions : (Questions 141 to 145) Read the following passage and answer the questions :

Most of us use the products of science --- railways, aeroplanes, electricity, wireless and thousands of other - without thinking how they came into existence. We take them for granted as if we were entitled to them as a matter of right. And we are very proud of the fact that we live in an advanced age and we ourselves so very 'advanced'. Now there is no doubt that our age is a very different one from previous ages and I think it is perfectly correct to say that it is far more advanced. But that is different thing from saying that we as individuals or groups are more advanced. It would be the height of absurdity to say that an engine driver can run an engine and Plato or Socrates could not, the engine driver is more advanced than, or is superior to Plato or Socrates.
