Before the 1920s, film used to be silent with just the action on the scene along with subtitles. Come the decade of 1920 and the advent of new technology, the filmmakers had the possibility to synchronise a soundtrack with the action on the screen. This included dialogues, musical score and special effects. After this development, the movies were called talkies since the audience was able to hear the actors talk with each other. There was no stopping from then on and the next significant development was the introduction of colour. However, colour movies were somewhat slow to catch on, especially when compared to the addition of sound to the movie. Another reason for this slow acceptance of colour was the considerable developing and processing cost it entailed. With passing of time, and improving technology, the colour processing became as affordable as black-and-white films. More and more movies were filmed in colour to a point when the film makers did away with black-and-white films.

Given below are two statements: one is labelled as Assertion A and the other is labelled as Reason R

Assertion A : In case of substitute commodities X_1 and X_2 , both $\frac{\partial X_1}{\partial P_2}$ and $\frac{\partial X_2}{\partial P_1}$ are positive, where $\frac{\partial X_1}{\partial P_2}$ means partial marginal demand of X_1 with respect to P_2 and $\frac{\partial X_2}{\partial P_1}$ means partial marginal demand of X_2 with respect to P_1

Reason R : In case of substitute commodities, increase in price of one of them causes an increase in demand for the other provided the price of the other commodity is held fixed.
